Aircell Bungee Retention in Knighthawk, Ladyhawk and S-TEK/RECtek

The clip that was used to fasten the bungee extremities in the aircell of the Knighthawk, Ladyhawk and S-TEK/RECtek has been substituted with a new component. This new part, referred to as “bungee bell” (PN 21.101.102), still allows the diver to adjust the tension in the bungee, and has the advantage of providing a more secure connection. Bungee length has not changed with the new component, so all existing jackets can be retrofitted with the new component. The figure below shows how it is installed.
